PROGRAM SUMMARY

The program is designed for individuals who are interested in camera and photography; employees in the media industry; and students who have completed a bachelor's degree in media and visual arts.

PROGRAM OBJECTIVES

- Learn how to effectively capture images on camera with accuracy and art with a sense of effective photographic storytelling.
- Explore and develop a broad background understanding of the history of the camera.
- Understand the essential elements in any photograph workflow and explore camera function via lenses and filters.
- Increase understanding of camera basics such as lens combination options, diaphragm, aperture, f-Stops and focal strength.
- Learn how to move away from manual mode and control your camera on your own in terms of adjusting shutter speed to developing depth of field.
- Develop the ability to feel the different moods of light with proper camera control and gain a deeper understanding of how light can positively alter images.

MODULE 1

Camera & Lenses

MODULE 2

Shutter & Aperture

MODULE 3

Exposure & Metering

MODULE 4

Light & color
